

Sai Dhruva K V

Senior Technical Program Manager — Driving AI & Platform Programs at Enterprise Scale

Technical Program Management · GenAI/LLM Program Delivery · Cross-Functional Delivery · Risk & Governance

Bengaluru, India · +91 8123 166 570 · saidhruvakv@outlook.com · linkedin.com/in/saidhruv · sdkv.in

ALSO AVAILABLE: [AI & Technology Leader →](#) · [Frontend Architect →](#)

PROFESSIONAL SUMMARY

Technical Program Leader with 10+ years owning end-to-end delivery across 20–30-engineer organizations — roadmaps, risk and dependency tracking, and cross-team coordination. Deep, current hands-on experience with GenAI/LLM program delivery, agentic automation, and enterprise data-platform governance, most recently compressing a month-long delivery cycle to under four days.

Highlights: 10+ years technical program leadership · up to 30 engineers in largest program scope · 10+ organizations aligned · 20+ technologies delivered · delivery cycle compressed from 1 month to <4 days · ~95% fewer critical errors · ~40% faster program delivery · ~67% less dev time via AI-assisted delivery.

CORE COMPETENCIES

Technical Program Management, Risk Management & Governance, Stakeholder Management, Cross-Functional Team Leadership, Program & Roadmap Planning, KPI/SLA Definition & Reporting, GenAI/LLM Program Delivery, Agile Delivery, Vendor & Contract Management, Mentoring & Coaching, Enterprise Architecture, Technology Strategy.

TECHNICAL SKILLS

Program & Delivery Tools: Jira, Asana, Risk Registers, Dependency Tracking, Release Coordination

AI & Data: Generative AI, LLM Products, Agentic AI, NLP Analytics, ML Pipelines, Data Architecture, Data Standards, Data Analytics

Cloud (AWS): Lambda, API Gateway, CloudFormation, DynamoDB, CloudFront, CloudWatch, Cognito, S3

Engineering (hands-on): ReactJS, Next.js, Node.js, React Native, JavaScript, GraphQL, Elasticsearch, Python

DevOps & CI/CD: Terraform, CircleCI, Jenkins, GitHub, Bitbucket

PROFESSIONAL EXPERIENCE

AMD — Consulting Architect

via Infobell IT Solutions Pvt. Ltd. · February 2025 – Present

- Own technical program delivery for agentic AI initiatives, driving ~30 engineers through the full SDLC — from roadmap definition through production release.
- Architect and govern an enterprise AI data platform and data standards, aligning multiple business units on shared, reusable, auditable infrastructure.
- Direct GenAI/LLM program delivery as technical lead for a natural-language benchmark-analysis product, coordinating model, prompt, and delivery decisions across the team.
- Reduce manual, human-in-the-loop effort by spearheading agent-based pipelines for AI-augmented data validation, enrichment, and reasoning — improving accuracy, scalability, and throughput.
- Compressed a month-long delivery cycle to under four days by re-architecting the Automated Benchmarking Platform, enterprise data warehouse, and end-to-end workflow — a program-level schedule and process win.
- Established program governance mechanisms — explainability, access control, and reuse guardrails — that de-risked enterprise AI adoption and kept delivery auditable across teams.
- Coordinate cross-business-unit alignment, mentoring engineers and driving shared platforms, standards, and delivery practices across multiple orgs.
- Deliver measurable program outcomes: 100% AI-coded products, ~67% less development time, ~40% faster delivery, and ~95% fewer critical production errors via AI-augmented testing embedded in the delivery pipeline.

FINEOS (formerly Spraoi) — Senior Software Developer

FINEOS Corporate Holdings, Ireland · March 2018 – January 2025

- Led cross-functional program delivery across ~20 engineers, designers, and QA to ship an enterprise insurance portal spanning product showcase, e-commerce, document management, and claims tracking.
- Owned the AI/ML platform end-to-end — data architecture, pipelines, and model delivery — establishing it as the reusable backbone for the organization's intelligent product features.
- Drove a cross-team personalization program that shipped predictive plan recommendations, measurably lifting user engagement and conversion.
- Built scalable, reusable delivery infrastructure — a standardized AI/ML training accelerator and a reusable workflow pipeline builder — cutting time-to-insight and eliminating duplicated engineering effort across teams.
- Engineered data-quality guardrails — self-describing dataset infrastructure with built-in validation and error handling — ensuring integrity and trust across AI workloads.
- Set delivery and mentoring standards across the engineering org, raising code quality and shipping consistency.

Goin LLC — Consulting Mobile Application Developer

June 2017 – March 2018

- Led delivery of an inclusive cab aggregator program, ensuring accessibility for riders with disabilities and WCAG compliance.
- Coordinated requirements, design, and QA across an iOS Rider app and a React Native Driver app spanning registration, booking, and real-time tracking.

HPE — Consulting Mobile Application Developer

October 2016 – June 2017

- Drove rapid-prototyping programs for enterprise-partner mobile and web apps, supporting HPE's mobility product strategy.
- Coordinated cross-platform delivery in ReactJS, Android, and PHP/MySQL, expediting time-to-market by 20%.

iService — Mobile Application Developer

Service Monk Technologies Pvt. Ltd. · October 2015 – October 2016

- Managed delivery of a CRM suite with integrated geo-fencing and mobile lab testing, ensuring scalability across fragmented Android ecosystems.

Freelance Consultant — Part-time, concurrent

2016 – Present

- Partnered with diverse clients to scope, plan, and deliver tailored web and mobile programs across JavaScript frameworks and cloud services, on time and within budget.
