

Sai Dhruva K V

AI & Technology Leader — Architecting Intelligent Platforms at Scale

Generative AI · Enterprise Architecture · Cloud Engineering · Organizational Transformation

Bengaluru, India · +91 8123 166 570 · saidhruvakv@outlook.com · linkedin.com/in/saidhruv · sdkv.in

ALSO AVAILABLE: [Frontend Architect →](#) · [Senior Technical Program Manager →](#)

PROFESSIONAL SUMMARY

AI & Technology Leader and Enterprise Architect with 10+ years leading engineering teams, technology strategy, and organizational transformation at enterprise scale. Proven track record designing and governing AI platforms, agentic AI systems, and cloud-native architecture on AWS that turn strategy into measurable business value.

Highlights: 10+ years leading at scale · 8+ years AI/ML platform ownership · 10+ organizations shaped · 20+ technologies delivered · 100% AI-coded products · ~67% less development time with AI · ~95% fewer critical errors · ~40% faster delivery.

CORE COMPETENCIES

Strategic Leadership, Technology Strategy, Enterprise Architecture, Organizational Transformation, Technical Vision & Innovation, Agile Delivery, Product Roadmapping, Project Management, Risk Management & Governance, Stakeholder Management, Vendor & Contract Management, Cross-Functional Team Leadership, Mentoring & Coaching, Cybersecurity Awareness.

TECHNICAL SKILLS

AI & Data: Generative AI, LLM Products, Agentic AI, NLP Analytics, ML Pipelines, Data Architecture, Data Standards, Data Analytics

Cloud (AWS): Lambda, API Gateway, CloudFormation, DynamoDB, CloudFront, CloudWatch, Cognito, S3

Engineering: ReactJS, Next.js, Node.js, React Native, iOS, Android, JavaScript, HTML, CSS, GraphQL, Elasticsearch, Python

DevOps & CI/CD: Terraform, CircleCI, Jenkins, GitHub, Bitbucket

Tools & Design: Jira, Asana, Figma, Adobe Photoshop

PROFESSIONAL EXPERIENCE

AMD — Consulting Architect

via Infobell IT Solutions Pvt. Ltd. · February 2025 – Present

- Led architectural vision and technical strategy for agentic AI, guiding ~30 engineers through the full SDLC to turn AI strategy into production-grade performance-analytics platforms.
- Architected and governed an enterprise AI data platform and data standards that made analytics explainable, reusable, and globally scalable across all business units.
- Directed the design of agentic AI systems for context-aware benchmark analysis, enabling adaptive, self-directed reasoning over large, complex hardware-performance datasets.
- Served as technical lead for an LLM-powered product that answers benchmark and performance questions in natural language — pairing hands-on model and prompt design with team direction.
- Spearheaded agent-based pipelines for AI-augmented data validation, enrichment, and reasoning, cutting manual effort while improving accuracy, scalability, and throughput.
- Delivered role- and entitlement-aware analytics applications that let stakeholders securely explore benchmark results through natural-language search and multi-dimensional performance comparison.
- Cut benchmark automation from one month to under four days by re-architecting the Automated Benchmarking Platform, enterprise data warehouse, and end-to-end workflow.
- Delivered products that are 100% AI-coded, using AI-assisted development to compress build time ~67% and accelerate delivery ~40% through AI-driven solutioning.
- Hardened release quality by embedding AI-augmented Playwright testing into the delivery pipeline, reducing critical production errors ~95%.
- Established AI governance guardrails — explainability, access control, and reuse — that de-risked enterprise adoption and kept analytics consistent and auditable across teams.
- Mentored engineers and aligned cross-business-unit AI/ML initiatives onto shared platforms, standards, and delivery practices, lifting overall technical quality.

FINEOS (formerly Spraoi) — Senior Software Developer

FINEOS Corporate Holdings, Ireland · March 2018 – January 2025

- Led cross-functional teams of ~20 engineers, designers, and QA to deliver an enterprise insurance portal spanning product showcase, e-commerce, document management, and claims tracking.
- Owned the AI/ML platform end to end — data architecture, pipelines, and model delivery — establishing it as the reusable backbone for the organization's intelligent product features.
- Directed an AI personalization initiative that shipped predictive plan recommendations, measurably lifting user engagement and conversion.
- Built an AI/ML training accelerator with standardized, reusable data pipelines, improving scalability and cutting time-to-insight for new models.
- Engineered self-describing dataset infrastructure with built-in validation and error handling, ensuring data integrity and trust across AI workloads.
- Drove adoption of a reusable workflow pipeline builder that let teams compose and deploy AI/ML workflows rapidly, eliminating duplicated engineering effort.
- Mentored developers and set front-end and delivery standards that raised code quality and shipping consistency across the portal.

Goin LLC — Consulting Mobile Application Developer

June 2017 – March 2018

- Led development of an inclusive cab aggregator, ensuring accessibility for riders with disabilities and WCAG compliance.
- Built an iOS Rider app; defined requirements and coordinated design and QA for registration, booking, and real-time tracking.
- Created a React Native Driver app with smart ride-tracking based on driver activity and accessibility guidelines.

HPE — Consulting Mobile Application Developer

October 2016 – June 2017

- Led rapid-prototyping initiatives for enterprise-partner mobile and web apps, supporting HPE's mobility product strategy.
- Delivered cross-platform solutions in ReactJS, Android, and PHP/MySQL, expediting time-to-market by 20%.

iService — Mobile Application Developer

Service Monk Technologies Pvt. Ltd. · October 2015 – October 2016

- Managed development of a CRM suite with integrated geo-fencing and mobile lab testing, ensuring scalability across fragmented Android ecosystems.

Freelance Consultant — Part-time, concurrent

2016 – Present

- Partnered with diverse clients to plan, build, and deliver tailored web and mobile solutions across JavaScript frameworks and cloud services, on time and within budget.
